GUIDELINES

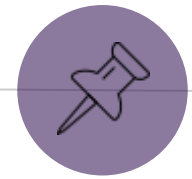

- **Think beyond AI:** You can use AI as a tool, but bring your own perspective, research, and originality.
- **Stand out from the competition:** Many teams may choose the same problem statement - identify what makes your approach unique.
- **Explain your solution clearly:** Don't just say "*We will use AI/ML*"; explain exactly how and why it solves the problem.
- **Show implementation depth:** Include relevant architecture, technologies, workflow, algorithms/models, and data sources.
- **Focus on feasibility:** Ensure your solution is practical, realistically implementable, and scalable.
- **Clearly define the impact:** Explain the problem, target users, and the value your solution creates.
- **Keep it structured and concise:** Avoid unnecessary or vague content and make key points easy to understand.
- **Add slides with purpose:** Up to 3 extra slides may be added, provided they are relevant and add value to your solution, while ensuring all required slides are covered.

(Delete this slide before final submission.)

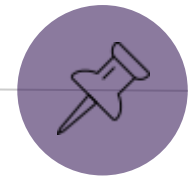

Domain and Problem Statement

- Identify the domain and clearly define the problem being addressed.

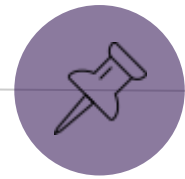

Idea/Solution

- Present the proposed solution, its core concept, and how it addresses the identified problem.

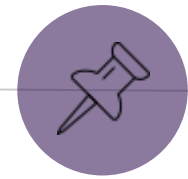

Existing Vs Proposed System

- Compare current solutions with your proposed improvement.

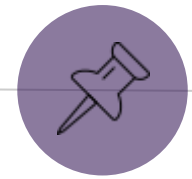

Innovation & USP

- Highlight the unique and innovative aspects of the proposed solution.

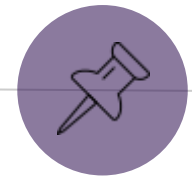

Objective & Scope of Solution

- Define the key objectives and scope of the proposed solution.

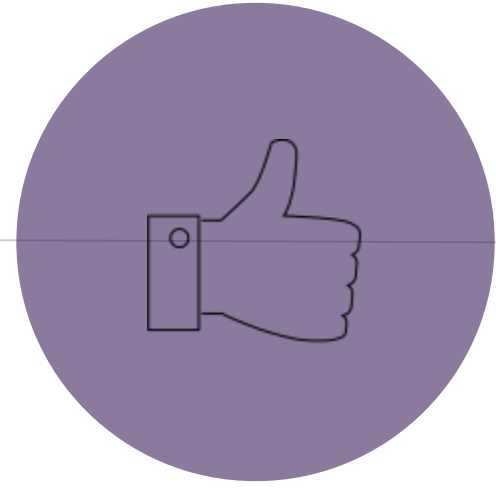

System Architecture

- Illustrate the high-level architecture and workflow of the solution.

Resources Required

- Mention the technologies, tools, datasets and other resources required for implementation.

Thank You!
